

# Project Proposal

## Web-Application for Tours

We are developing a system for the purpose of booking all types of travel and tour packages

Such as summer special packages, manali holiday packages, Shimla special packages, Weekend packages and adventures etc.

This system is made, so that customers can easily book packages for all packages of tourist places such as hills, treks and adventures.

Our web app will have two interfaces: - Admin and User.

User can browse through the details after registering themselves into the web application.

➤ User interface will have the following modules:

**User Register & Login:** New User has to register to the web app in order to view the packages, book the tours and write a feedback. If the user is already a registered customer, he/she can log in to the web app in order to carry out the functionalities.

**Packages:** User can witness the packages served with description and price along with a picture.

**Gallery:** Here you can see all the pictures of our previous tours and some pictures of travelers.

**About us and Contact us:** Here you can see the history and details about the company and you can contact the company on the given number for more inquiry and book your tours.

**Feedback:** The user can view and add his/her feedbacks.

- Admin interface will have following modules:

**Admin login:** Admin will first have to login.

**Add package:** Admin can add a new package, It's amount, its description and its image.

**Edit package:** Admin can edit package and its description.

**Delete package:** Admin can delete an existing package.

**Gallery:** Admin can manage (Add, Update and Delete) the pictures that are shown on the website
